

Notice of Hearing

September 20, 2010

Ref. 2010-H-114

The Canadian Nuclear Safety Commission (CNSC) will hold a hearing in September 2010 to consider the approval of the Environmental Assessment Guidelines for Cameco Corporation's proposed project for the development of an underground mine "Millennium" located in the Athabasca basin of northern Saskatchewan.

Cameco Corporation requires CNSC authorization to proceed with this work. The project will consist of an underground uranium mine located approximately 36 kilometres northeast of Cameco Corporation's Key Lake Operation. No milling would take place on-site. Ore and associated waste materials would be transported to a licensed mill along a new 21-kilometre access road that would connect to the existing road network between the Key Lake Operation and the McArthur River mine site. The proposed Millennium mine would produce 150,000 to 200,000 tonnes of ore annually for six to seven years.

The Commission has determined that a public hearing is not necessary to consider the proposed Environmental Assessment Guidelines for Cameco Corporation's request. The project is subject to a Project Agreement overseen by the Major Projects Management Office and is jointly being reviewed with the Province of Saskatchewan.

Following the deliberations, the Commission's decision on this matter will be made available to the public on the CNSC Web site.

The Commission will consider CNSC staff's written submission and Cameco Corporation's application.

CNSC staff's recommendations are not available on-line and must be requested through the Secretariat at the address below:
