# Notice of Hearing

---

March 9, 2011

Ref. 2011-H-103

The Canadian Nuclear Safety Commission (CNSC) will hold a hearing in March to consider the Environmental Assessment Screening Report (EASR) relating to Atomic Energy of Canada Limited (AECL)'s proposed National Research Universal (NRU) Reactor long-term management project. The NRU Reactor is located at Chalk River, Ontario.

AECL is proposing to undertake a number of improvements at its Chalk River site to support the continued operation of the NRU. These improvements include the construction, modification and operation of new and existing facilities and supporting infrastructure for the treatment of emissions and storage of waste.

The Commission has determined that a public hearing is not necessary to consider the EASR in this case. The hearing will be conducted by way of written submissions from CNSC staff and AECL.

Following the deliberations and decision of the Commission on this matter, a *Record of Proceedings, including Reasons for Decision* will be published on the CNSC Web site and made available to the public.

CNSC staff's recommendations and AECL's hearing submission are not available on-line and must be requested through the Secretariat at the address below:

c/o Julie Bouchard
