Letter to OPB Nov 3 '24

Please. No more nuclear plants of any sort. We don't know where or how to properly dispose of the high level waste. The final design is incomplete and, therefore, unexamined for high standards of human and environmental safety. The money that is being promised to and spent by the nuclear industry could be better utilized in solar, wind and other forms of energy/electricity. The governments could also be putting efforts into less consumer and industrial consumption of resources.

Please, let wisdoms prevail for a sustainable life rather than the ongoing consumption of earth resources.

And by the way: Nuclear energy is NOT CLEAN/carbon free when you consider the complete life cycle from its conception (e.g. mining and building) through to its completion (e.g. waste disposal and closing down of a facility). Then there is the toxicity, time to neutral radiation levels and so forth.....
