Dear President and Commission Members,

**Re: Cameco's licence renewal application for the Port Hope Conversion Facility
(November 3-5, 2026 Hearing)**

I'm writing on behalf of the Nuclear Innovation Institute (NII), Canada's premier research institute for the clean energy sector and a member-based not-for-profit organization with a unique role driving sector transformation, skill development and an innovative nuclear voice.

As one of NII's Founding Members, Cameco has played a pivotal role in our organization and has been a valued partner in advancing innovation and driving meaningful progress across Canada's nuclear sector.

Cameco Corporation is one of the largest global providers of the uranium fuel needed to power a safe, secure energy future. Utilities around the world rely on fuel solutions for the generation of safe, reliable, carbon-free nuclear power. Cameco's Port Hope Conversion Facility (PHCF) is one of only four uranium conversion facilities in the western world, with half of Ontario's electricity generated using the PHCF's products.

As an existing Class 1B Fuel Facility Licence holder, Cameco's Port Hope Conversion Facility is rigorously regulated by Canada's nuclear regulator, the Canadian Nuclear Safety Commission. Safety is the number one priority at Cameco—with environmental protections held at the highest CNSC rating.

Cameco is committed to sharing timely and accurate information about its operations activities with the community, engaging in two-way dialogue and engaging stakeholders in the company's operations in the region.

The Nuclear Innovation Institute supports Cameco's licence renewal application for the Port Hope Conversion Facility—as they continue to drive Canada's position as a global leader in the nuclear sector.

Sincerely,

A handwritten signature in black ink, appearing to read 'J. Linthorne', with a stylized flourish at the end.

Jessica Linthorne
