Re: Cameco's licence renewal application for the Port Hope Conversion Facility (Nov 3-5, 2026, Hearing)

Dear President and Commission Members,

My name is Rony Mathew, and I am a Project Manager with Cameco at the Port Hope Conversion Facility. I support capital and facility improvement projects with a focus on safety, compliance, engineering quality, execution, and stakeholder coordination.

Cameco's Port Hope Conversion Facility is an important part of the local community and Canada's nuclear fuel cycle. In my experience, Cameco maintains a disciplined operating culture focused on safe, responsible, and compliant work.

My relationship with Cameco has been very positive. Through project work at the facility, I have seen the value Cameco places on structured execution, collaboration, and practical engagement with operations, maintenance, engineering, procurement, contractors, and other stakeholders.

I understand that Cameco is requesting a 20-year renewal of the CNSC operating licence for the Port Hope Conversion Facility. In my view, this would provide stability for continued responsible operations, facility improvements, and long-term planning.

From my project experience, I have observed a strong emphasis on safety, environmental protection, quality, and continuous improvement. Project work is managed with attention to risk, field planning, commissioning readiness, documentation, and contractor coordination.

I have also had positive engagement with Cameco personnel and project stakeholders. Communication is practical and solution-focused, helping teams align on technical, operational, safety, and schedule requirements.

For these reasons, I support the 20-year renewal of Cameco's Port Hope Conversion Facility licence. Based on my experience, I have confidence in Cameco's commitment to safe operations, responsible environmental performance, stakeholder engagement, and continued positive contribution to the Port Hope community.

Sincerely,

Rony Mathew, P.Eng. PMP
