Canadian Nuclear Safety Commission (CNSC)

To Whom It May Concern:

On behalf of the Pembroke Regional Hospital, I submit this letter to the Canadian Nuclear Safety Commission (CNSC) in support of Canadian Nuclear Laboratories' (CNL) application for license renewal to March 21, 2028.

Canadian Nuclear Laboratories (CNL) is a vibrant and vital part of our local economy in the upper Ottawa Valley and a technological hub within our area. The proposed license extension would enable CNL to realize its Long-Term Strategy, a comprehensive plan to modernize and consolidate CRL site operations through the revitalization of essential infrastructure, the decommissioning of aging buildings and a significant investment in new, world-class science facilities. Once complete, the transformation will ensure that CNL continues its leadership position in the development of peaceful and innovative applications through nuclear science and technology. CNL plays an important role in our community through the delivery of critical nuclear products and services and as a vehicle for jobs and economic growth.

The Pembroke Regional Hospital is proud to have been the beneficiary over many decades of locally produced medical isotopes in the imaging, diagnoses and ultimate treatment of our patients.

The Pembroke Regional Hospital is fully supportive of CNL's application for license renewal to March 21, 2028.

Sincerely

Pierre Noel
President and CEO Pembroke
Regional Hospital
