

# Uranium Mines and Mills in Canada

## Staying safe and environmentally responsible

Canada has operating uranium mines and mills located in Saskatchewan. The Canadian Nuclear Safety Commission (CNSC) is responsible for regulating, licensing and inspecting these facilities to protect the public, workers and the environment.

### Digging up the facts:

#### 30 onsite inspections

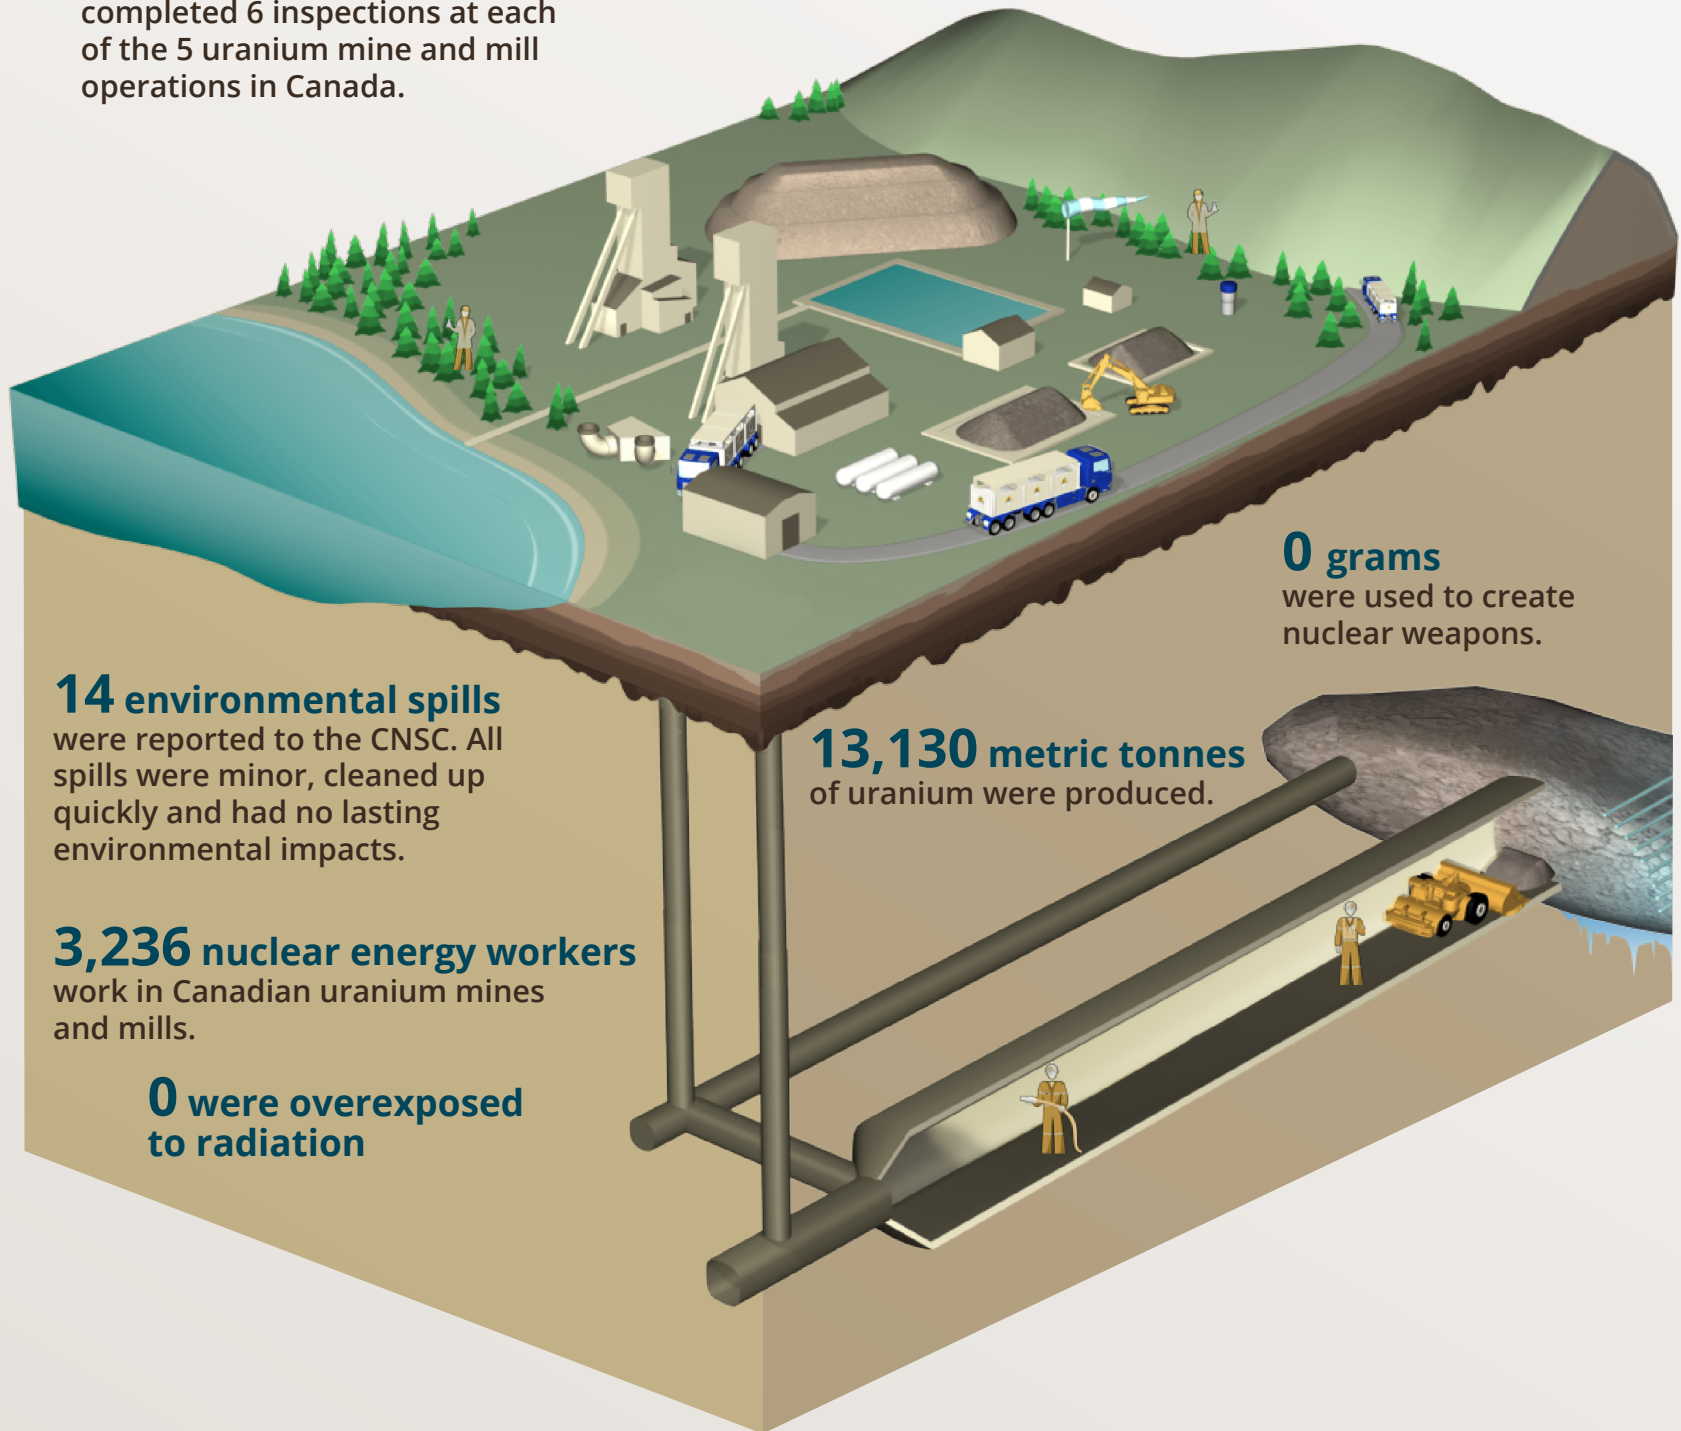

In 2017, CNSC inspectors completed 6 inspections at each of the 5 uranium mine and mill operations in Canada.

#### Every operating Canadian uranium mine and mill

received a satisfactory rating in all 14 safety and control areas.

#### Fish, animals and plants

are tested regularly to reaffirm they are safe for consumption.

1999 - Cluff Lake operational

2008 - Cluff Lake decommissioned

2014 - Cluff Lake decommissioned

The CNSC **requires** nuclear facility operators to provide **financial guarantees** to cover the costs of decommissioning and long-term waste management **to ensure no burden is left to future generations.**
