**Petition to the House of Commons
Public Hearing on GE-Hitachi Facility at 1025 Lansdowne Ave**

WHEREAS:

- GE-Hitachi Canada operates a nuclear fuel production facility at 1025 Lansdowne Ave in Toronto, Ontario.
- In 2010 GE-Hitachi Canada was granted a license from the Canadian Nuclear Safety Commission (CNSC) to operate for ten years.
- The Nuclear Safety and Control Act mandates that licensees must develop a program to inform local residents of the activities at the facility and the potential environmental, health and safety impacts of those activities.
- CNSC officials have indicated that that they have not been satisfied with the degree to which GE-Hitachi Canada has complied with the licensing requirements pertaining to its Public Information Program.
- Davenport residents have made it clear that they had not been properly informed of, or consulted about, the nuclear fuel production facility in their neighbourhood.

WE THE UNDERSIGNED call upon the Government of Canada and the CNSC to immediately review the operating license for GE-Hitachi Canada's nuclear fuel facility at 1025 Lansdowne Ave and hold a public hearing in the adjacent community.
