The Canadian Nuclear Safety Commission,

The International Association of Heat and Frost Insulators and Allied Workers, Local 95 consists of certified installers of Mechanical Insulation. Our members are trained to excel in the installation of insulation, in compliance with the environmental standards set out by the Province of Ontario.

Over the years, we have worked closely with Bruce Power and have built a strong working relationship with them. We can say, without hesitation, that they work with professionalism, dignity and a complete regard for the principle of Safety-First at all times. In addition, they are an equal opportunity Employer, and support employment within indigenous communities, including several members that belong to our Union. As a Union, we feed off this poise in workmanship and are honoured to be in partnership with Bruce Power.

Throughout the years, our members have also developed a sense of confidence and security within Bruce Stations A and B, as they witness firsthand Bruce Power's work ethic and their effort to do all that they can to ensure job security for future generations. Bruce Power continues to display all the correct behaviours of a world leading nuclear facility, and should be supported in their long-term goals to better our economy.

Therefore, The International Association of Heat and Frost Insulators and Allied Workers, Local 95 would like to take this opportunity to urge the Canadian Nuclear Safety Commission to grant Bruce Power the ten-year operating license that they have requested, allowing them to proceed with their "Life-Extension Program". Bruce Power has our full support for this effort, which is expected to see \$13 billion invested into the industry, which will, in turn, create jobs through to 2064. We hope the CNSC shares in this collective vision to lead our industry into a promising future.

If you have any questions and/or concerns, please feel free to contact me at the number listed below.

Sincerely yours,

David Gardner
