***Re: CNA Written Intervention – CNSC Regulatory Oversight Report for Uranium Mines and Mills in Canada: 2018 and Regulatory Oversight Report for Uranium and Nuclear Substance Processing Facilities in Canada: 2018***

The Canadian Nuclear Association (CNA) is pleased to provide this intervention in regards to both the 2018 Regulatory Oversight Report for Uranium Mines and Mills in Canada and the 2018 Regulatory Oversight Report for Uranium and Nuclear Substance Processing Facilities in Canada.

Since 1960, CNA has been the national voice of the Canadian nuclear industry. The CNA has approximately 100 members representing over 60,000 Canadians employed directly, or indirectly, in uranium mining and exploration, fuel processing, electricity generation, and the production and advancement of nuclear medicine.

The nuclear industry is well-regulated and these reports for 2018 demonstrate that the industry continues to perform well in relation to the identified safety and control areas.

Cameco has continued to demonstrate strong management of its uranium and mining milling operations in Saskatchewan despite market conditions that have placed three operations into a state of safe care and maintenance. Even with this transition, Cameco has continued to demonstrate strong performance and operated safely throughout 2018.

Thank you for the opportunity to provide our support for these operations in northern Saskatchewan and Ontario.

Sincerely,

Steve Coupland  
Director, Regulatory and Environmental Affairs  
Canadian Nuclear Association
