CMD 21-H107Q
Questions from Commission Panel Members in the matter of Ontario Power Generation’s application for a licence amendment to authorize activities related to the production and possession of Molybdenum-99 (Mo-99) at the Darlington Nuclear Generating Station (NGS)

The Panel of the Commission, in conducting hearing in writing 2021-H-107, reviewed written submissions provided by CNSC staff, OPG, and 10 intervenors. In its consideration of whether to amend, under subsection 24(2) of the *Nuclear Safety and Control Act*, the Power Reactor Operating Licence for the Darlington Nuclear Generating Station to authorize the production of Molybdenum-99, the Panel of the Commission required additional information. On September 9, 2021, the Commission issued CMD 21-H107Q to document questions with regards to 2021-H-107.

The following correction is made to CMD 21-H107Q:

> On page 2 of the document, Table 2, item 4, paragraph 2, the sentence
>
> "Please clarify how long this dwell period storage will be and how much reactivity is expected to remain from non- 99 Mo sources after this period."
>
> is changed to
>
> "Please clarify how long this dwell period storage will be and how much **activity** is expected to remain from non- 99 Mo sources after this period."

Marc A. Leblanc
Commission Secretary
