Re: Intervention by Mark LeBlanc for the NB Power Licence Renewal Application (Hearing Ref.2022-H-02)

To whom it may concern:

I, Mark LeBlanc, request to intervene in the hearing in the above-referenced matter.

Please consider this comment submitted to the Canadian Nuclear Safety Commission, regarding the license renewal of the NB Power Point Lepreau Nuclear Generating Station.

I am a parent concerned about the future of my children and leaving them with legacy radioactive waste. I am concerned about radioactive emissions in the event of an accident including emergency preparedness. In my 35 years in Moncton, I have not received emergency preparedness of any kind from NBPower.

Consider energy conservation in this licensing application. I've attached a photo of an Enercheck assessment, in my family, in which some common and available materials and services were used to reduce household energy consumption by 64.2%. NB Power is not fulfilling its mandate of energy conservation.

I want to hold NBPower to a 5-year license while insisting that they; -deal with long-term nuclear waste, -improve emergency preparedness, and -actively promote energy conservation in New Brunswick.

If in 5 years, NBPower does not address these concerns in a significant way, the next 5-year hearing should be about decommissioning.

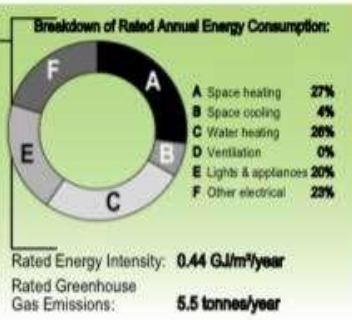

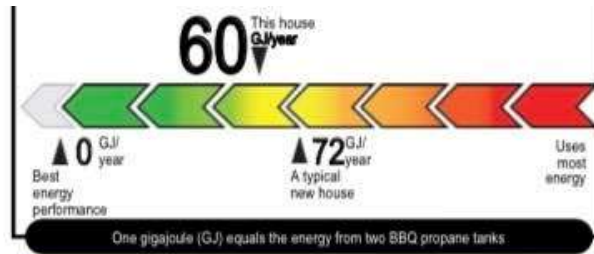

Do not grant a 25-year nuclear license to NPower.

Sincerely,

Mark LeBlanc

Moncton NBE

Please acknowledge receipt of this intervention

The energy consumption indicated on your utility bills may be higher or lower than your EnerGuide rating. This is because standard assumptions have been made regarding how many people live in your house and how the home is operated. Your rating is based on the condition of your house on the day it was evaluated.

Quality assured by: Enercheck Solutions

Dear Homeowner,

Thank you for stepping forward into the Total Home Energy Savings Program and trusting the Enercheck team to perform an energy evaluation of your home. We would like to congratulate you for performing renovations on your home to improve its efficiency and also lowering your carbon footprint.

Your initial report stated that your house rated at 168 GJ/year before renovations. Implementing our recommendations improved your EnerGuide rating to **60 GJ/year**.

The air tightness of your home improved by **62.8%** and all renovations should reduce your annual energy consumption by an estimated **64.2%!**

Also, you have reduced your carbon footprint by an estimated **10.1 tons** of Green house gases per year!

Included is your official EnerGuide label indicating your house's actual rating after improvements. This sticker is to be affixed to your electrical box for further reference.

“Our success is measured in Energy Savings. The environment benefits equally!”

TOGETHER, WE CAN MAKE A DIFFERENCE!
