Please consider this email my written intervention to the Canadian Nuclear Safety Commission, regarding the licence renewal of the NB Power Point Lepreau Nuclear Generating Station.

I am 24, a lifelong resident of New Brunswick, and a serious supporter of renewable energy.

A 25 year license is blatantly trying to halt any action on the dismantling of a potentially dangerous, definitely toxic, and huge monetary drain on our province until im nearly 50 years old. And also way past the point of no return in combating climate change.

New Brunswick is the poorest province in Canada and taking my and everyone elses taxes to subsidize a failing and outdated enterprise, or God forbid, expand it, will only kill this province faster. Let Point Lepreau die and take the money wasted on its life support to build renewable energy infrastructure in its place.

The Bay of Fundy has some of the highest tides in the world and is one source of huge energy generation potential if this province, and this country, would stop dragging its feet on doing what's right for its citizens and for the planet.

Please acknowledge the receipt of this email.

Thank you for reading,
Robyn Connell, resident of Saint John
