

Certification of Radiation Devices

March 2023

Certification of Radiation Devices

The Canadian Nuclear Safety Commission (CNSC) regulates the use of nuclear energy and materials to protect the health, safety and security of Canadians and the environment; and to respect Canada's international commitments on the peaceful use of nuclear energy.

The [*Nuclear Safety and Control Act*](#) empowers the CNSC to certify the use of radiation devices. The [*Nuclear Substances and Radiation Devices Regulations*](#) stipulate regulatory requirements for certification.

Examples of radiation devices that require certification by the CNSC include smoke detectors, fixed and portable nuclear gauges, emergency lighting, and radiography equipment.

A certificate issued by the CNSC for a device applies to a specific model design with precise operating conditions only. Any future changes to the design or use may require recertification of the radiation device.

What follows is the list of radiation devices that are certified by the CNSC for use in Canada as of March 6, 2023.
